ABOUT

Backend Developer with experience in building APIs, transaction workflows, real-time features, and role-based access control systems using NestJS and Go. The main technologies I have worked with are PostgreSQL, MySQL, MongoDB, Redis, RabbitMQ, and backend architecture for wallet, social, and management platforms. I specialize in web development, which is my genuine interest and passion, driving me to learn, practice, and improve my skills to solve problems and bring more value to your company.

SKILLS

- *Programming languages:* Javascript, TypeScript, Go, SQL, NoSQL.
- *Frameworks and libraries:* NestJS, Gin, React.
- *Programming paradigms and architectures:* RESTful API, GraphQL, Monolith, Microservices.
- *Database management:* PostgreSQL, MySQL, MongoDB.
- *Tools and platforms:* Git, GitHub, GitLab.
- *Languages:* NativeVietnamese and Intermediate English.
- *Soft skills:* Communication, teamwork, responsibility, creativity, problemsolving, adaptive.

EDUCATION

Can Tho University of Technology
Software Engineer
Major: Software engineering
GPA: 3,47/4.0
TOEIC - ETS Certificate: 520

Oct 2020 - Jan 2025

NVC, Ninh Kieu, Can Tho

EXPERIENCE

TEKNIX TECHNOLOGY CORPORATION (CAN THO BRANCH)
Backend Developer - NestJS & Go(Centralized Wallet & Social Chat)

March 2025 - March 2026

Ninh Kieu, Can Tho

- Centralized Wallet: Developed a backend API for centralized wallet operations supporting transaction on multiple networks
 - **Technologies:** NestJS, PostgreSQL, Redis, RabbitMQ, Aby.
 - **Responsibility:**
 - Wallet management and balance tracking across multiple blockchains.
 - Implemented real-time transaction processing for internal transfers, withdrawals, deposits, and swaps, including balance updates via message queue handlers, rollback mechanisms for failed transactions, and real-time notifications.
 - Built and integrated a financial fraud detection and transaction monitoring system by implementing a Sentinel platform for real-time transaction analysis and monitoring.
 - Designed and implemented permission system using Permify RBAC service with feature-based access control, ensuring secure API endpoints for dashboard operations.
- Real-time Chat & Social Platform: Implemented features including posts, approving management and reel-time notifications.
 - **Technologies:** Go(Gin), MongoDB, Peertube, R2 Cloudflare, NATs.
 - **Responsibility:**
 - Post Management: Multi-format post creation supporting images, text content, and rich media with metadata
 - Reels Management: Comprehensive reel system supporting video uploads, article-based reels, and scheduled publishing
 - Comment Management: Dynamic comment creation and management
 - Playlist Management: Dynamic playlist creation and management
 - Approval Workflow: Content moderation system with approval management for reels
 - Notifications: Real-time push notifications for likes, comments, and content updates

DANG AN TECH COMPANY LIMITED (DA.Tech)
Frontend Developer - ReactJS (Viet247.vn - POS System)

Apr 2024 - March 2025

Ninh Kieu, Can Tho

- Integrated electronic invoices from suppliers(Viettel and Mobifone) for Viet247.vn
- Collaborated with teammates to develop and convert the frontend side for Viet247.vn

PROJECTS

● Quizzes & Exams Management System(*thesis*)

Team(size: **2**, role: **back-end**)

Aug 2024 – Dec 2024

Description: Developed a question management and automatic exam paper generation system for the university that aims to help lecturers easily personalize the generation exams and management questions, and the data related to exam papers.

Responsibility: Build the server-side functionality, including randomly generating and managing exam papers, managing and classifying questions, classes, courses, chapters, users, permissions, user authentication with email and authorization(RBAC), and related data.

Technologies: NestJS, MongoDB, Apollo GraphQL, NodeMailer, Firebase.

Github: <https://github.com/locnguyen2k2/exam-management-system>.

● Laboratory Management System

Team(size: **3**, role: **back-end**)

Jan 2024 – Jul 2024

Description: Developed a laboratory information management system that enhances the efficiency of transferring, borrowing, returning, and managing item information for the university laboratory.

Responsibility: Build the server-side functionality, including transferring, borrowing, returning items, and CRUD operations (items, rooms, categories, users, roles, permissions) and user authentication with email and authorization.

Technologies: NestJS, MySQL, Swagger, TypeORM, NodeMailer.

Github: <https://github.com/locnguyen2k2/laboratory-management-system>.

● HiCoffee - Order Management System

Team(size: **2**, role: **full-stack, mobile application**)

Sep 2022 – Dec 2023

Description: Developed an ordering system to manage information, the ordering process, statistics and payment.

Responsibility: Building the server-side functionality, including managing orders, payments, statistics, products, categories, areas, tables, invoices, user authentication, and authorization. Developed the frontend for the client side of the website and application.

Technologies: Php, MySQL, Axios, Ajax, Javascript, Websocket(Ratchet), HTML, CSS, React Native.

Github(web management): <https://github.com/locnguyen2k2/hi-coffee-management-system>

Github(ordering application): <https://github.com/locnguyen2k2/hi-coffee-order-application>
